

TICK REMOVAL

According to the CDC, use fine-tipped tweezers to grasp the tick as close to the skin's surface as possible and pull upward with steady, even pressure. Don't twist or jerk the tick as this can cause other parts(eg, the mouth) to break off and remain in the skin.

If the tick does break, remove the remaining parts with tweezers. If you are unable to do so, leave it alone and let the skin heal.

After removing the tick, thoroughly clean the bite area and your hands with rubbing alcohol, an iodine scrub, or soap and water. Submerge the live tick in alcohol, place it in a sealed container, wrap it tightly in tape, or flush it down the toilet. Never crush a tick with your finger.

Note: Avoid applying heat, nail polish, or petroleum jelly to the tick.
